Stylgraph® (CAD)

A solution dedicated to technical drawing

Stylgraph® is a specific software for apparel industry, simple and user-friendly. From the drawing to the technical file, this solution will help you to realize your creations and provides all concerned information systems.

Some functions Stylgraph® :

- Create technical drawing in symmetry
- Add / create shadows
- Scan / creation of a fabric
- Photos retouching
- Realize a collection plan
- Create a technical file
- Free use of library items

VetiExpert® (CAD)

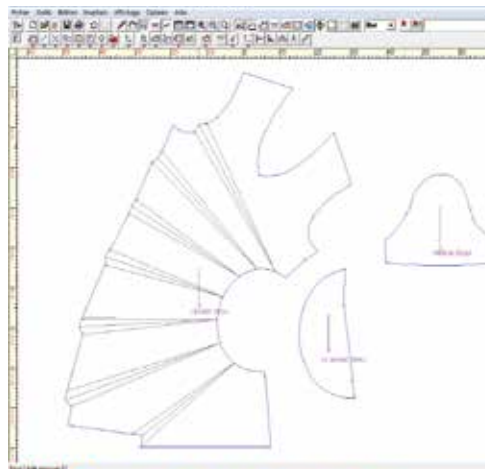

Pattern establishment

VetiExpert® is one of the two existing French CAD solutions (computer aided design) in the fashion industry. Composed of 3 additional modules, it will allow you to digitize / design a model, to define your graduation rules, to create the marker according to material criteria and finally to print it or cut it. Vetigraph Expert is compatible with all devices on the market.

Some functions VetExpert® :

- Screen conception
- Creation of folds, pleats, darts, etc.
- Gradation by 20 different methods
- Manual / automatic placement
- Easy Adding marks for cutting
- Automatic printing / cutting
- Compatibility with other software

Fashion Collection® (PDM / PLM)

Product Lifecycle Management

Following a collection from the designer drawing to the production is essential in every company. Fashion Collection solution is a simple tool to use, including all products lifecycle processes. You will have access, via a retro-planning, to a comprehensive and detailed view of your collection progress, through the integration of products classification, prototypes quality control, or costs calculation.

 PASTILLE CREPE	Pr 17,65 € Pv 44,13 € M. 2,50 %
 SAMANTHA CARO	Pr 214,00 € Pv 500,00 € M. 2,34 % 100%coton
 SELENA JERSEY	
 SOPHIA JERSEYDC	Pr 11,98 €
 ELENA DENTELLE	Pr 46,00 € Pv 138,00 € M. 3,00 % 45% polyester 55%soie

Some functions Fashion Collection® :

- Management of materials and accessories
- Links with our CAD VetExpert®
- Control of prototypes and set size
- Customization of the retro-planning
- Evaluation of the collection balance with statistics
- Multiple Export to Excel

Software Suite Praco®

The simple and friendly overall management

The software suite Praco® management allows the follow up of your customer orders from the production start to the invoicing, as well as accounting, Retail Back Office and Front Office for sales points.

Scanshoots®

Photo Studio with automated images treatment

Realizing shooting photos has never been so easy! With its luminous structure (available in multiple formats) and pictures stored profiles, instant cropped photos will be done in a single click to feed your website or internal databases (ERP , product catalogs , ...).

Some functions Scanshoots®:

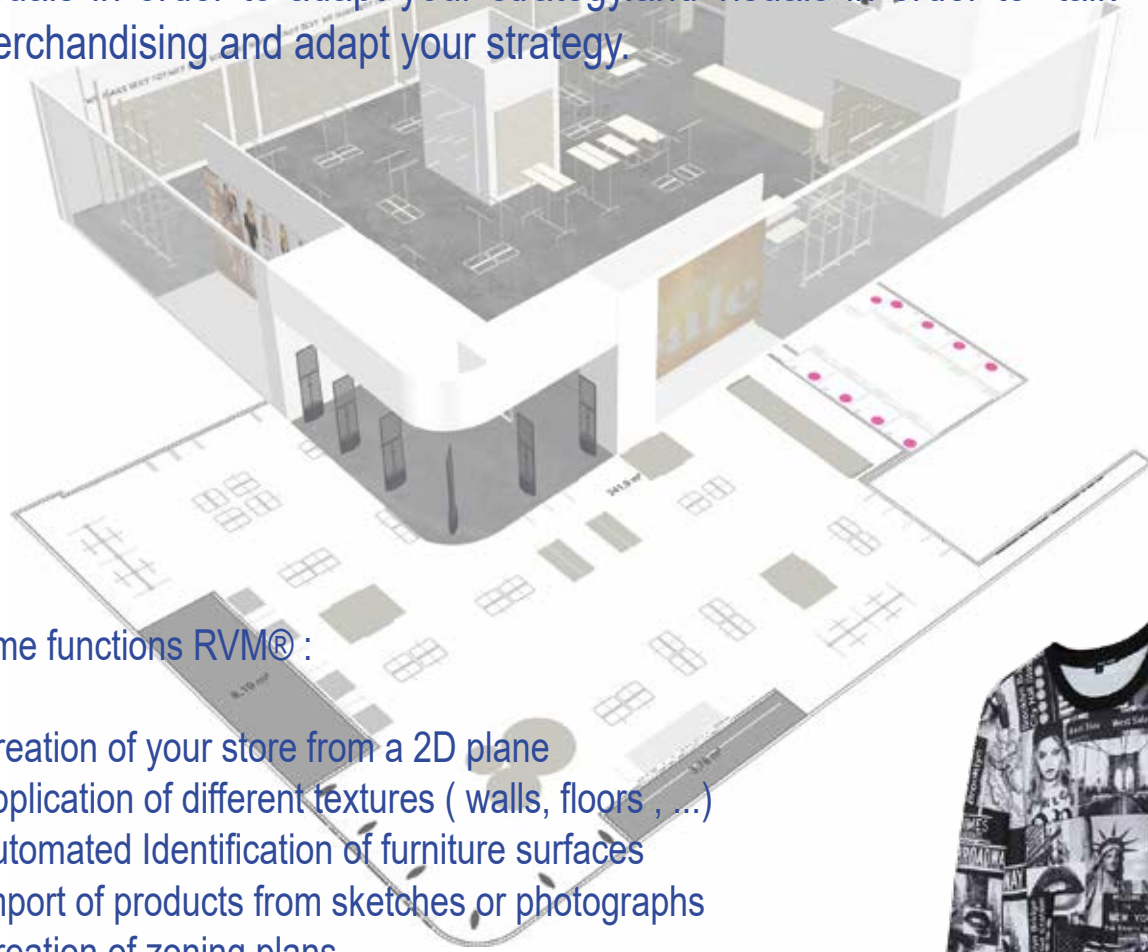

- Flat pictures or on mannequins (ghost or alive)
- Taking pictures of several visual simultaneously
- Instant Automatic Cropping
- Save multiple profiles by product type
- Display of actual measurements of products
- Multiple exports proposed (PNG , JPG , DXF , ...)
- Feeding of your databases (Web, ERP , ...)

Retail Visual Merchandising®

Merchandising in 3D for all

Design within few hours your corporate merchandising charter virtually working in 2D! The import of your furniture and products is done quickly and easily, offering a virtual result where you can balance your sale data and your visuals in order to adapt your strategy and visuals in order to "talk" to your merchandising and adapt your strategy.

Some functions RVM® :

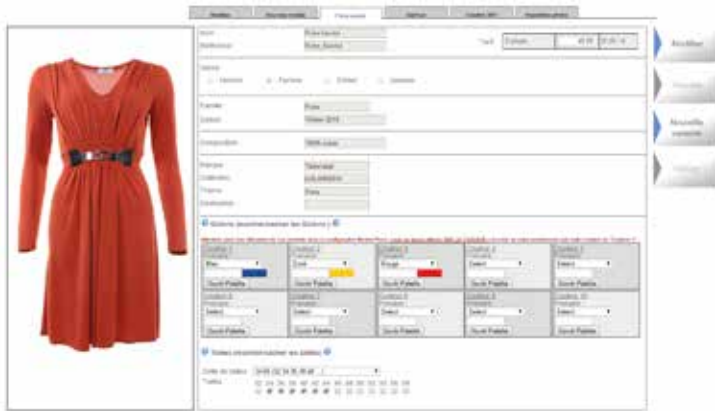

- Creation of your store from a 2D plane
- Application of different textures (walls, floors , ...)
- Automated Identification of furniture surfaces
- Import of products from sketches or photographs
- Creation of zoning plans
- Exports of pictures and movies in 2D or 3D
- Reconciliation with your sales (Web, ERP , ...)

Tailorretail®

The predictive analysis tool applied to Retail

Tailorretail® is a predictive analysis tool made to adapt your stocks to customers' expectations considering their opinions. It helps to anticipate with a possible advance which product will be the best, where and when. In this way, you will be able to act on buying, stock and sidelines, then on the company's profitability.

Some functions of Tailorretail® :

- Products database management
- Customers data importing
- Qualification of database through a first test
- Prob about the collection using qualified customers
- Manifold statistics with dynamic graphics
- Export of the whole information on Excel files
- Printings of full reports on PDF files

Prix initial : 33.00 €
Prix de base : 21 €

Prix donné le plus bas : 10 €
Prix de la majorité : 36 €

Prix moyen : 30.69 €

Vetigraph3D®

See your linesheet in 3D

The purpose of Vetigraph3D® solution is to replace the first samples by a virtual simulation of cloth fitting, in order to avoid the excessive number of samples and to gain reactivity; Because "sewing" a "cloth" or a garment with a real fabric in a study office is tedious.

Some functions of Vetigraph3D® :

- Large libraries available
- Creation of textures and their attributes
- Easy Integration and use of components
- Mannequins with measurements settings
- Linesheet of samples with different fabrics
- Export results on mobile or static mannequin

Vetigraph Expert MtoM®

Made to measure garment

The example of the concept Store “Measures®” is to design a tailor-made suit from a scanner combining morphological data of a person to obtain automatically all patterns of the model. This unique technology allows to level the deficiencies of tailor master and to propose tailored suit at an affordable price.

Measures® principle:

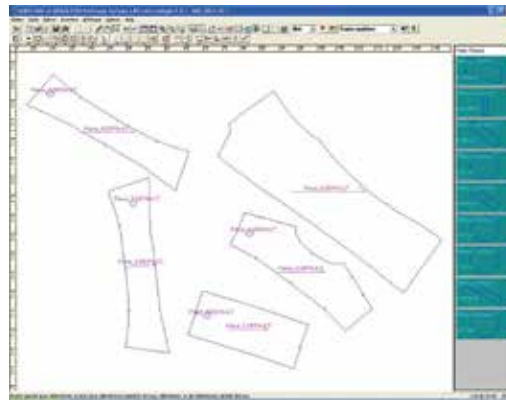

- 1 You enter a cabin taking your measurements in 3 seconds (200 measurements).
- 2 You choose the characteristics of your suit (fabric, collar , buttons, lining , ...).
- 3 We produce your costume automatically through vetigraph Expert MtoM® solution.
- 4 You proceed to the final fitting.

Scangraph®

Digitalizing in a single click from a photo

Scangraph® offers a real alternative to conventional digitizing system where we use on sensor on a digitizing table. Less bulky and faster, this system lets you vectorize one or more patterns together in a single click thanks to a camera. Within this solution, you can use a simplified CAD to edit your forms and generate various formats (PLT , DXF , ...).

Some functions Scangraph® :

- Creation of profiles depending on the type of patterns
- Vectorization of one or more patterns at the same time
- Automated Identification of notches and scores and right wire
- Modification of points, curves or straight lines
- Creation of the pattern glossary
- Exports in formats compatible with any CAD solution

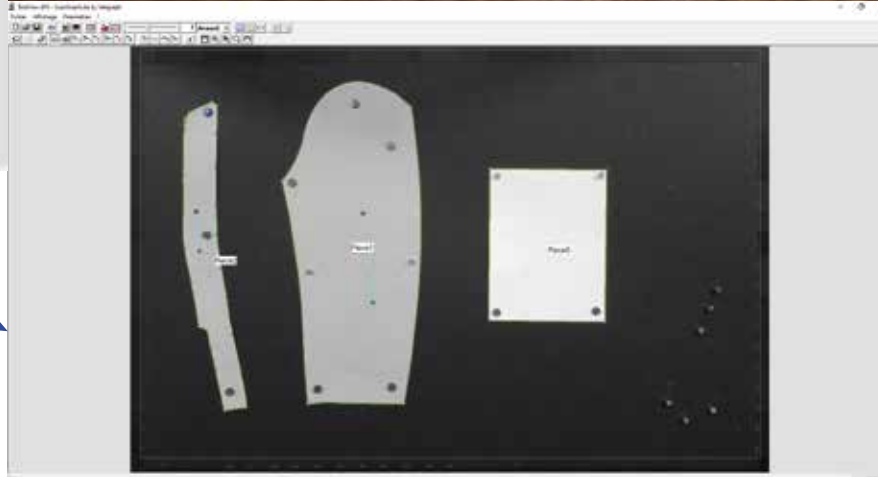

Scangraph Lite®

Versatile digitizing tool

Scangraph Lite® is our simplest solution for digitalization.

Using a magnetic medium and a simple camera, digitize your patterns in one click.

Compatible with all CAD tools.

Graphcad® (2D / 3D CAD)

Solutions for the Technical Industry

From the technical service to the production, through prototyping, Graphcad® is accessible to all companies for the construction and modification of forms on the screen, placement optimization, cutting plans as well as the automated cutting of flexible & technical materials (aerospace, car manufacturer, furnitures, ...)

Some functions Graphcad® :

- Creation or import of templates on the screen
- Compatibility with all CAD
- Automated placement
- Data export on plotter or cutting
In ISO, HPGL, ... formats.
- Management of all devices
- Print of miniature Plans

Graphcut®

A wide range of cutting PLCs

Our multi-line or single-line cutting controllers, dynamic or static, with multiple types of cuts blades technologies are robust and adapted high productivity needs, both for the textile and technical industry. They are driven by our Veticut® software, a user-friendly program offering many features and optimizing the machine productivity by ensuring the cutting quality.

Graphcut multi-ply

Some functions Veticut® :

- Management of common lines
- Optimization of sharpening
- Transformation of arched curves
- Display of the estimated time end cutting
- Field file management
- Optimization of cutting strategy

Graphcut mono-ply
